

Proposition: Gender equality in education has been largely achieved.

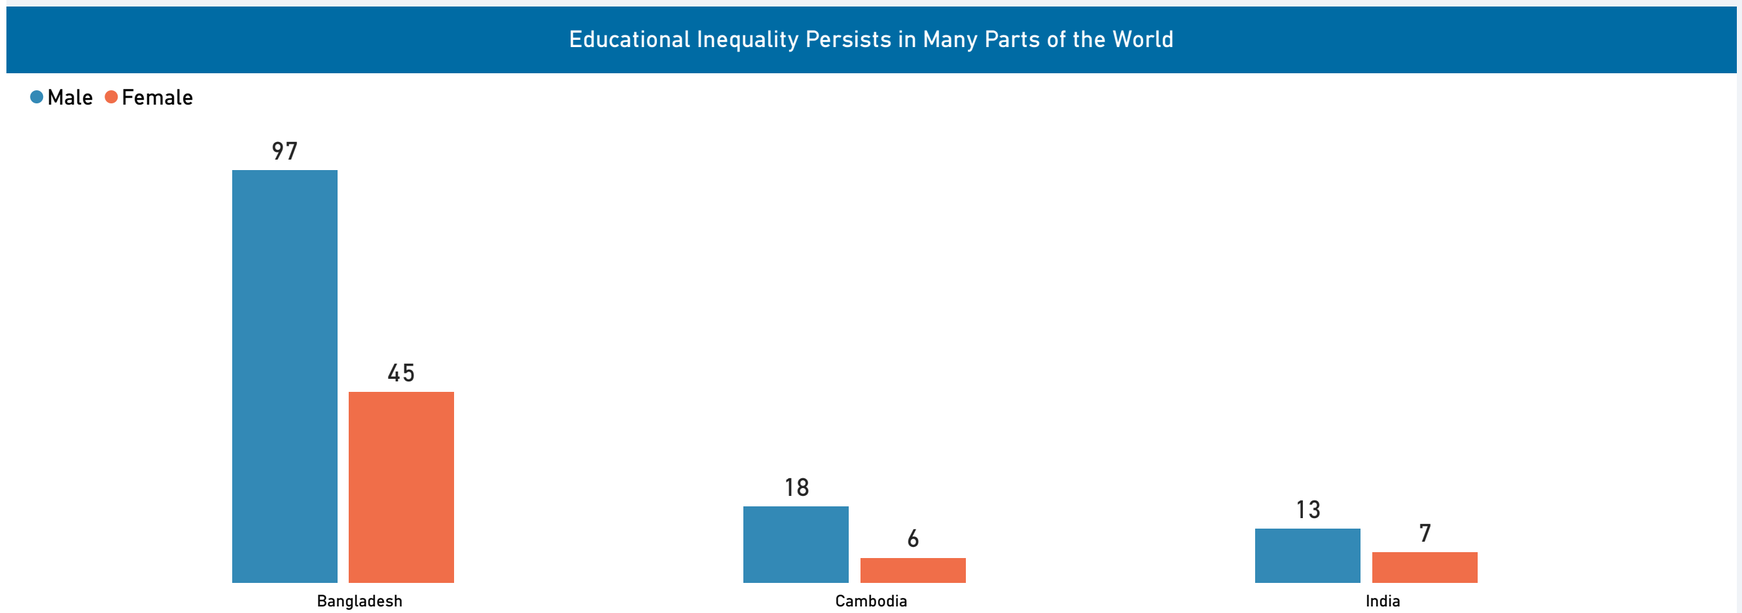

Visual 1:
-Line Chart shows male vs female educational attainment over time

Visual 2:
-Bar Chart showing attainment is not very similar across the genders

Proposition: Gender inequality in education still persists.
Visual 1:
-Line Chart shows trends of gender attainment is uneven

Visual 2:
-Bar Chart showing countries with largest disparities

Proposition

Page 1

Gender equality in has largely been achieved.

Page 2

Gender inequality in still persists.

What I think: Gender equality in education as improved over time. However, in some countries there is still gender inequality. Using the data such as countries, years, and income status we can create deceptive visualizations that support or dispute educational attainment by gender.

Deceptive Techniques Used

Positive Visualizations

- Focused on countries and regions with strong educational outcomes.
- Used a long time frame to emphasize improvement over time.
- Visual 1 Score 1.5: Line chart over a long period of time
- Visual 2 Score 1.0: Countries where there is less gender inequality

Negative Visualizations

- Used titles that emphasized inequality rather than progress
- Selected subsets of data that supported the opposing narrative
- Visual 3 Score -0.5: Did not filter and included the entire population over a long period of time

Visual 4 Score +1.5: Male and female attainment
